Summary: Adapter protein that links activated FGR and NGF receptors to downstream signaling

pathways. Plays an important role in the activation of MAP kinases and in the

phosphorylation of PIK3R1, the regulatory subunit of phosphatidylinositol 3-kinase, in

response to ligand-mediated activation of FGFR1. Modulates signaling via SHC1 by competing

for a common binding site on NTRK1.[UniProtKB/Swiss-Prot Function]

Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
