

Product datasheet for **TL313119V**

Thrombin Receptor (F2R) Human shRNA Lentiviral Particle (Locus ID 2149)

Product data:

Product Type:	shRNA Lentiviral Particles
Product Name:	Thrombin Receptor (F2R) Human shRNA Lentiviral Particle (Locus ID 2149)
Locus ID:	2149
Synonyms:	CF2R; HTR; PAR-1; PAR1; TR
Vector:	pGFP-C-shLenti (TR30023)
Format:	Lentiviral particles
Components:	F2R - Human shRNA lentiviral particles (4 unique 29mer target-specific shRNA, 1 scramble control), 0.5 ml each, >10 ⁷ TU/ml.
RefSeq:	BC016059 , NM_001311313 , NM_001992 , NM_001992.1 , NM_001992.2 , NM_001992.3 , NM_001992.4 , BC051909 , BC051909.1 , BC002464 , BM994328 , NM_001992.5
UniProt ID:	P25116
Summary:	Coagulation factor II receptor is a 7-transmembrane receptor involved in the regulation of thrombotic response. Proteolytic cleavage leads to the activation of the receptor. F2R is a G-protein coupled receptor family member. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Aug 2015]
shRNA Design:	These shRNA constructs were designed against multiple splice variants at this gene locus. To be certain that your variant of interest is targeted, please contact techsupport@origene.com . If you need a special design or shRNA sequence, please utilize our custom shRNA service .

**Performance
Guaranteed:**

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).

Product images:

GFP signal was observed under microscope at 48 hours after transduction of TL313119A virus into HEK293 cells. TL313119A virus was prepared using lenti-shRNA TL313119A and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of TL313119B virus into HEK293 cells. TL313119B virus was prepared using lenti-shRNA TL313119B and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of [TL313119C] virus into HEK293 cells. [TL313119C] virus was prepared using lenti-shRNA [TL313119C] and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of [TL313119D] virus into HEK293 cells. [TL313119D] virus was prepared using lenti-shRNA [TL313119D] and [TR30037] packaging kit.
