GTP binding protein era homolog (ERAL1) Human shRNA Plasmid Kit (Locus ID 26284)

Product data:

Product Type: shRNA Plasmids

Product Name: GTP binding protein era homolog (ERAL1) Human shRNA Plasmid Kit (Locus ID 26284)

Locus ID: 26284

Synonyms: CEGA; ERA; ERA-W; ERAL1A; ERAL1B; H-ERA; HERA-A; HERA-B; PRLTS6

Vector:pGFP-C-shLenti (TR30023)E. coli Selection:Chloramphenicol (34 ug/ml)

Mammalian Cell

Selection:

Puromycin

Format: Lentiviral plasmids

Components: ERAL1 - Human, 4 unique 29mer shRNA constructs in lentiviral GFP vector(Gene ID = 26284).

5µg purified plasmid DNA per construct

29-mer scrambled shRNA cassette in pGFP-C-shLenti Vector, TR30021, included for free.

RefSeq: NM 001317985, NM 001317986, NM 005702, NR 134328, NM 005702.1, NM 005702.2,

NM 005702.3, BC019094, BC019094.2, BM683046, NM 005702.4

UniProt ID: <u>075616</u>

Summary: The protein encoded by this gene is a GTPase that localizes to the mitochondrion. The

encoded protein binds to the 3' terminal stem loop of 12S mitochondrial rRNA and is

required for proper assembly of the 28S small mitochondrial ribosomal subunit. Deletion of this gene has been shown to cause mitochondrial dysfunction, growth retardation, and apoptosis. Several transcript variants encoding different isoforms have been found for this

gene. [provided by RefSeq, Dec 2015]

shRNA Design: These shRNA constructs were designed against multiple splice variants at this gene locus. To

be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u>. If you need a special design or shRNA sequence, please utilize our <u>custom shRNA service</u>.

Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
