## **ELF5 Human shRNA Plasmid Kit (Locus ID 2001)**

**Product data:** 

**Product Type:** shRNA Plasmids

Product Name: ELF5 Human shRNA Plasmid Kit (Locus ID 2001)

Locus ID: 2001 Synonyms: ESE2

Vector:pGFP-C-shLenti (TR30023)E. coli Selection:Chloramphenicol (34 ug/ml)

Mammalian Cell

Selection:

Puromycin

Format: Lentiviral plasmids

Components: ELF5 - Human, 4 unique 29mer shRNA constructs in lentiviral GFP vector(Gene ID = 2001). 5µg

purified plasmid DNA per construct

29-mer scrambled shRNA cassette in pGFP-C-shLenti Vector, TR30021, included for free.

RefSeq: NM 001243080, NM 001243081, NM 001422, NM 198381, NM 001422.1, NM 001422.2,

NM 001422.3, NM 198381.1, NM 001243080.1, NM 001243081.1, BC029743, BC029743.1,

NM 001422.4, NM 198381.2, NM 001243080.2

UniProt ID: Q9UKW6

**Summary:** The protein encoded by this gene is a member of an epithelium-specific subclass of the Ets

transcritpion factor family. In addition to its role in regulating the later stages of terminal differentiation of keratinocytes, it appears to regulate a number of epithelium-specific genes found in tissues containing glandular epithelium such as salivary gland and prostate. It has very low affinity to DNA due to its negative regulatory domain at the amino terminus. Several alternatively spliced transcript variants encoding different isoforms have been described for

this gene. [provided by RefSeq, Jul 2011]

shRNA Design: These shRNA constructs were designed against multiple splice variants at this gene locus. To

be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u>. If you need a special design or shRNA sequence, please utilize our <u>custom shRNA service</u>.

## Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
