

Product datasheet for **TL313235V**

ELAVL1 Human shRNA Lentiviral Particle (Locus ID 1994)

Product data:

Product Type:	shRNA Lentiviral Particles
Product Name:	ELAVL1 Human shRNA Lentiviral Particle (Locus ID 1994)
Locus ID:	1994
Synonyms:	ELAV1; Hua; HUR; MeIG
Vector:	pGFP-C-shLenti (TR30023)
Format:	Lentiviral particles
Components:	ELAVL1 - Human shRNA lentiviral particles (4 unique 29mer target-specific shRNA, 1 scramble control), 0.5 ml each, >10 ⁷ TU/ml.
RefSeq:	NM_001419 , NM_001419.1 , NM_001419.2 , BC003376 , BC003376.2 , BM664469 , BM696191 , NM_001419.3
UniProt ID:	Q15717
Summary:	The protein encoded by this gene is a member of the ELAVL family of RNA-binding proteins that contain several RNA recognition motifs, and selectively bind AU-rich elements (AREs) found in the 3' untranslated regions of mRNAs. AREs signal degradation of mRNAs as a means to regulate gene expression, thus by binding AREs, the ELAVL family of proteins play a role in stabilizing ARE-containing mRNAs. This gene has been implicated in a variety of biological processes and has been linked to a number of diseases, including cancer. It is highly expressed in many cancers, and could be potentially useful in cancer diagnosis, prognosis, and therapy. [provided by RefSeq, Sep 2012]
shRNA Design:	These shRNA constructs were designed against multiple splice variants at this gene locus. To be certain that your variant of interest is targeted, please contact techsupport@origene.com . If you need a special design or shRNA sequence, please utilize our custom shRNA service .

**Performance
Guaranteed:**

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).

Product images:

GFP signal was observed under microscope at 48 hours after transduction of TL313235A virus into HEK293 cells. TL313235A virus was prepared using lenti-shRNA TL313235A and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of TL313235B virus into HEK293 cells. TL313235B virus was prepared using lenti-shRNA TL313235B and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of [TL313235C] virus into HEK293 cells. [TL313235C] virus was prepared using lenti-shRNA [TL313235C] and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of [TL313235D] virus into HEK293 cells. [TL313235D] virus was prepared using lenti-shRNA [TL313235D] and [TR30037] packaging kit.
