Product datasheet for TL313641V

Cullin 3 (CUL3) Human shRNA Lentiviral Particle (Locus ID 8452)

Product data:

Product Type:	shRNA Lentiviral Particles
Product Name:	Cullin 3 (CUL3) Human shRNA Lentiviral Particle (Locus ID 8452)
Locus ID:	8452
Synonyms:	CUL-3; NEDAUS; PHA2E
Vector:	pGFP-C-shLenti (TR30023)
Format:	Lentiviral particles
Components:	CUL3 - Human shRNA lentiviral particles (4 unique 29mer target-specific shRNA, 1 scramble control), 0.5 ml each, >10^7 TU/ml.
RefSeq:	<u>NM 001257197, NM 001257198, NM 003590, NM 003590.1, NM 003590.2, NM 003590.3, NM 003590.4, NM 001257197.1, NM 001257198.1, BC039598, BC039598.1, BC031844, BC092409, NM 001257198.2, NM 003590.5</u>
UniProt ID:	<u>Q13618</u>
Summary:	This gene encodes a member of the cullin protein family. The encoded protein plays a critical role in the polyubiquitination and subsequent degradation of specific protein substrates as the core component and scaffold protein of an E3 ubiquitin ligase complex. Complexes including the encoded protein may also play a role in late endosome maturation. Mutations in this gene are a cause of type 2E pseudohypoaldosteronism. Alternatively spliced transcript variants encoding multiple isoforms have been observed for this gene. [provided by RefSeq, Mar 2012]
shRNA Design:	These shRNA constructs were designed against multiple splice variants at this gene locus. To be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u> . If you need a special design or shRNA sequence, please utilize our <u>custom shRNA service</u> .

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2022 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

GRIGENE Cullin 3 (CUL3) Human shRNA Lentiviral Particle (Locus ID 8452) – TL313641V

Performance Guaranteed: OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
