### Collagen I (COL1A1) Human shRNA Lentiviral Particle (Locus ID 1277)

**Product data:** 

**Product Type:** shRNA Lentiviral Particles

**Product Name:** Collagen I (COL1A1) Human shRNA Lentiviral Particle (Locus ID 1277)

Locus ID: 1277

Synonyms: CAFYD; EDSARTH1; EDSC; OI1; OI2; OI3; OI4

**Vector:** pGFP-C-shLenti (TR30023)

Format: Lentiviral particles

COL1A1 - Human shRNA lentiviral particles (4 unique 29mer target-specific shRNA, 1

scramble control), 0.5 ml each, >10^7 TU/ml.

RefSeq: NM 000088, NM 000088.1, NM 000088.2, NM 000088.3, BC036531, BC036531.2

UniProt ID: P02452

Summary: This gene encodes the pro-alpha1 chains of type I collagen whose triple helix comprises two

alpha1 chains and one alpha2 chain. Type I is a fibril-forming collagen found in most connective tissues and is abundant in bone, cornea, dermis and tendon. Mutations in this gene are associated with osteogenesis imperfecta types I-IV, Ehlers-Danlos syndrome type VIIA, Ehlers-Danlos syndrome Classical type, Caffey Disease and idiopathic osteoporosis. Reciprocal translocations between chromosomes 17 and 22, where this gene and the gene for platelet-derived growth factor beta are located, are associated with a particular type of skin tumor called dermatofibrosarcoma protuberans, resulting from unregulated expression of the growth factor. Two transcripts, resulting from the use of alternate polyadenylation

signals, have been identified for this gene. [provided by R. Dalgleish, Feb 2008]

shRNA Design: These shRNA constructs were designed against multiple splice variants at this gene locus. To

be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u>. If you need a special design or shRNA sequence, please utilize our <u>custom shRNA service</u>.

#### Collagen I (COL1A1) Human shRNA Lentiviral Particle (Locus ID 1277) - TL313800V

# Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
