# Product datasheet for TL313813

### Caspr (CNTNAP1) Human shRNA Plasmid Kit (Locus ID 8506)

## **Product data:**

Product Type:	shRNA Plasmids
Product Name:	Caspr (CNTNAP1) Human shRNA Plasmid Kit (Locus ID 8506)
Locus ID:	8506
Synonyms:	CASPR; CHN3; CNTNAP; NRXN4; P190
Vector:	pGFP-C-shLenti (TR30023)
E. coli Selection:	Chloramphenicol (34 ug/ml)
Mammalian Cell Selection:	Puromycin
Format:	Lentiviral plasmids
Components:	CNTNAP1 - Human, 4 unique 29mer shRNA constructs in lentiviral GFP vector(Gene ID = 8506). 5µg purified plasmid DNA per construct 29-mer scrambled shRNA cassette in pGFP-C-shLenti Vector, TR30021, included for free.
RefSeq:	NM 003632, NM 003632.1, NM 003632.2, BC160132, BC171797
UniProt ID:	<u>P78357</u>
Summary:	The game meduations initially identified as a 100 kD protain according to device the contaction
-	The gene product was initially identified as a 190-kD protein associated with the contactin- PTPRZ1 complex. The 1,384-amino acid protein, also designated p190 or CASPR for 'contactin- associated protein,' includes an extracellular domain with several putative protein-protein interaction domains, a putative transmembrane domain, and a 74-amino acid cytoplasmic domain. Northern blot analysis showed that the gene is transcribed predominantly in brain as a transcript of 6.2 kb, with weak expression in several other tissues tested. The architecture of its extracellular domain is similar to that of neurexins, and this protein may be the signaling subunit of contactin, enabling recruitment and activation of intracellular signaling pathways in neurons. [provided by RefSeq, Jan 2009]

#### **GRIGENE** Caspr (CNTNAP1) Human shRNA Plasmid Kit (Locus ID 8506) – TL313813

Performance Guaranteed: OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
