CHMP2B Human shRNA Plasmid Kit (Locus ID 25978)

Product data:

Product Type: shRNA Plasmids

Product Name: CHMP2B Human shRNA Plasmid Kit (Locus ID 25978)

Locus ID: 25978

Synonyms: ALS17; CHMP2.5; DMT1; FTDALS7; VPS2-2; VPS2B

Vector: pGFP-C-shLenti (TR30023)

E. coli Selection: Chloramphenicol (34 ug/ml)

Puromycin

Mammalian Cell

Selection:

Format: Lentiviral plasmids

Components: CHMP2B - Human, 4 unique 29mer shRNA constructs in lentiviral GFP vector(Gene ID =

25978). 5µg purified plasmid DNA per construct

29-mer scrambled shRNA cassette in pGFP-C-shLenti Vector, TR30021, included for free.

RefSeq: NM 001244644, NM 014043, NM 014043.1, NM 014043.2, NM 014043.3, NM 001244644.1,

BC001553, BC001553.1, BM828410, BM982148, NM 014043.4, NM 001244644.2

UniProt ID: 09UON3

Summary: This gene encodes a component of the heteromeric ESCRT-III complex (Endosomal Sorting

Complex Required for Transport III) that functions in the recycling or degradation of cell surface receptors. ESCRT-III functions in the concentration and invagination of ubiquitinated endosomal cargos into intralumenal vesicles. The protein encoded by this gene is found as a monomer in the cytosol or as an oligomer in ESCRT-III complexes on endosomal membranes. It is expressed in neurons of all major regions of the brain. Mutations in this gene result in one form of familial frontotemporal lobar degeneration. [provided by RefSeq, Jul 2008]

shRNA Design: These shRNA constructs were designed against multiple splice variants at this gene locus. To

be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u>. If you need a special design or shRNA sequence, please utilize our <u>custom shRNA service</u>.

Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
