Apc6 (CDC16) Human shRNA Lentiviral Particle (Locus ID 8881)

Product data:

Product Type: shRNA Lentiviral Particles

Product Name: Apc6 (CDC16) Human shRNA Lentiviral Particle (Locus ID 8881)

Locus ID: 888°

Synonyms: ANAPC6; APC6; CDC16Hs; CUT9

Vector: pGFP-C-shLenti (TR30023)

Format: Lentiviral particles

Components: CDC16 - Human shRNA lentiviral particles (4 unique 29mer target-specific shRNA, 1 scramble

control), 0.5 ml each, >10^7 TU/ml.

RefSeq: NM 001078645, NM 001318517, NM 001318518, NM 001330101, NM 001330104,

NM 001330105, NM 003903, NM 003903.1, NM 003903.2, NM 003903.3, NM 003903.4,

BM663581, NM 001078645.3

UniProt ID: Q13042

Summary: The protein encoded by this gene functions as a protein ubiquitin ligase and is a component

of the multiprotein APC complex. The APC complex is a cyclin degradation system that governs exit from mitosis by targeting cell cycle proteins for degredation by the 26S proteasome. Each component protein of the APC complex is highly conserved among

eukaryotic organisms. This protein, and other APC complex proteins, contain a

tetratricopeptide repeat (TPR) domain; a protein domain that is often involved in proteinprotein interactions and the assembly of multiprotein complexes. Multiple alternatively spliced transcript variants, encoding distinct proteins, have been identified. [provided by

RefSeq, Jan 2016]

shRNA Design: These shRNA constructs were designed against multiple splice variants at this gene locus. To

be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u>. If you need a special design or shRNA sequence, please utilize our <u>custom shRNA service</u>.

Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
