

Product datasheet for **TL314098V**

PD-L1 (CD274) Human shRNA Lentiviral Particle (Locus ID 29126)

Product data:

Product Type:	shRNA Lentiviral Particles
Product Name:	PD-L1 (CD274) Human shRNA Lentiviral Particle (Locus ID 29126)
Locus ID:	29126
Synonyms:	B7-H; B7H1; hPD-L1; PD-L1; PDCD1L1; PDCD1LG1; PDL1
Vector:	pGFP-C-shLenti (TR30023)
Format:	Lentiviral particles
Components:	PD-L1 / CD274 - Human shRNA lentiviral particles (4 unique 29mer target-specific shRNA, 1 scramble control), 0.5 ml each, >10 ⁷ TU/ml.
RefSeq:	NM_001267706 , NM_001314029 , NM_014143 , NR_052005 , NM_014143.1 , NM_014143.2 , NM_014143.3 , NM_001267706.1 , BC069381 , BC074984 , BC113734 , BC113736 , NM_014143.4
UniProt ID:	Q9NZQ7
Summary:	This gene encodes an immune inhibitory receptor ligand that is expressed by hematopoietic and non-hematopoietic cells, such as T cells and B cells and various types of tumor cells. The encoded protein is a type I transmembrane protein that has immunoglobulin V-like and C-like domains. Interaction of this ligand with its receptor inhibits T-cell activation and cytokine production. During infection or inflammation of normal tissue, this interaction is important for preventing autoimmunity by maintaining homeostasis of the immune response. In tumor microenvironments, this interaction provides an immune escape for tumor cells through cytotoxic T-cell inactivation. Expression of this gene in tumor cells is considered to be prognostic in many types of human malignancies, including colon cancer and renal cell carcinoma. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Sep 2015]
shRNA Design:	These shRNA constructs were designed against multiple splice variants at this gene locus. To be certain that your variant of interest is targeted, please contact techsupport@origene.com . If you need a special design or shRNA sequence, please utilize our custom shRNA service .

**Performance
Guaranteed:**

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).

Product images:

GFP signal was observed under microscope at 48 hours after transduction of TL314098A virus into HEK293 cells. TL314098A virus was prepared using lenti-shRNA TL314098A and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of TL314098B virus into HEK293 cells. TL314098B virus was prepared using lenti-shRNA TL314098B and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of [TL314098C] virus into HEK293 cells. [TL314098C] virus was prepared using lenti-shRNA [TL314098C] and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of [TL314098D] virus into HEK293 cells. [TL314098D] virus was prepared using lenti-shRNA [TL314098D] and [TR30037] packaging kit.
