Product datasheet for TL314136V

Cyclin H (CCNH) Human shRNA Lentiviral Particle (Locus ID 902)

Product data:

Product Type:	shRNA Lentiviral Particles
Product Name:	Cyclin H (CCNH) Human shRNA Lentiviral Particle (Locus ID 902)
Locus ID:	902
Synonyms:	САК; СусН; р34; р37
Vector:	pGFP-C-shLenti (TR30023)
Format:	Lentiviral particles
Components:	CCNH - Human shRNA lentiviral particles (4 unique 29mer target-specific shRNA, 1 scramble control), 0.5 ml each, >10^7 TU/ml.
RefSeq:	<u>NM 001199189, NM 001239, NM 001239.1, NM 001239.2, NM 001239.3, NM 001199189.1, BC016705, BC016705.1, BC005280, BC016823, BC022351, NM 001363539, NM 001364075, NR 157068, NR 157069, NR 157070, NR 157071, NM 001364076, NM 001239.4</u>
UniProt ID:	<u>P51946</u>
Summary:	The protein encoded by this gene belongs to the highly conserved cyclin family, whose members are characterized by a dramatic periodicity in protein abundance through the cell cycle. Cyclins function as regulators of CDK kinases. Different cyclins exhibit distinct expression and degradation patterns which contribute to the temporal coordination of each mitotic event. This cyclin forms a complex with CDK7 kinase and ring finger protein MAT1. The kinase complex is able to phosphorylate CDK2 and CDC2 kinases, thus functions as a CDK-activating kinase (CAK). This cyclin and its kinase partner are components of TFIIH, as well as RNA polymerase II protein complexes. They participate in two different transcriptional regulation processes, suggesting an important link between basal transcription control and the cell cycle machinery. A pseudogene of this gene is found on chromosome 4. Alternate splicing results in multiple transcript variants.[provided by RefSeq, Nov 2010]
shRNA Design:	These shRNA constructs were designed against multiple splice variants at this gene locus. To be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u> . If you need a special design or shRNA sequence, please utilize our <u>custom shRNA service</u> .

Science Cyclin H (CCNH) Human shRNA Lentiviral Particle (Locus ID 902) – TL314136V

Performance Guaranteed: OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
