### **ASNA1 Human shRNA Plasmid Kit (Locus ID 439)**

#### **Product data:**

**Product Type:** shRNA Plasmids

**Product Name:** ASNA1 Human shRNA Plasmid Kit (Locus ID 439)

Locus ID: 439

Synonyms: ARSA-I; ARSA1; ASNA-I; ASNA1; TRC40

Vector:pGFP-C-shLenti (TR30023)E. coli Selection:Chloramphenicol (34 ug/ml)

Mammalian Cell Puromycin

Selection:

Format: Lentiviral plasmids

**Components:** ASNA1 - Human, 4 unique 29mer shRNA constructs in lentiviral GFP vector(Gene ID = 439).

5µg purified plasmid DNA per construct

29-mer scrambled shRNA cassette in pGFP-C-shLenti Vector, TR30021, included for free.

**RefSeq:** <u>NM 004317, NM 004317.1, NM 004317.2, NM 004317.3, BC002651, BC002651.2, BM718941,</u>

NM 004317.4

UniProt ID: <u>043681</u>

Summary: This gene represents the human homolog of the bacterial arsA gene, encoding the arsenite-

stimulated ATPase component of the arsenite transporter responsible for resistance to arsenicals. This protein is also a central component of a transmembrane domain (TMD) recognition complex (TRC) that is involved in the post-translational delivery of tail-anchored (TA) proteins from the cytosol to the endoplasmic reticulum (ER). It recognizes and selectively

binds the TMD of TA proteins in the cytosol, and delivers them to the ER for insertion.

[provided by RefSeq, Oct 2011]

shRNA Design: These shRNA constructs were designed against multiple splice variants at this gene locus. To

be certain that your variant of interest is targeted, please contact <a href="techsupport@origene.com">techsupport@origene.com</a>. If you need a special design or shRNA sequence, please utilize our <a href="techsupport@origene.com">custom shRNA service</a>.

# Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
