## **ARMET (MANF) Human shRNA Plasmid Kit (Locus ID 7873)**

**Product data:** 

**Product Type:** shRNA Plasmids

**Product Name:** ARMET (MANF) Human shRNA Plasmid Kit (Locus ID 7873)

**Locus ID:** 7873

Synonyms: ARMET; ARP

Vector: pGFP-C-shLenti (TR30023)

E. coli Selection: Chloramphenicol (34 ug/ml)

Mammalian Cell Puromycin

Selection:

Format: Lentiviral plasmids

Components: MANF - Human, 4 unique 29mer shRNA constructs in lentiviral GFP vector(Gene ID = 7873).

5µg purified plasmid DNA per construct

29-mer scrambled shRNA cassette in pGFP-C-shLenti Vector, TR30021, included for free.

RefSeq: NM 006010, NM 006010.1, NM 006010.2, NM 006010.3, NM 006010.5, BC007282, BC033055,

BC113588, BC113590, NM 006010.6

UniProt ID: P55145

Summary: The protein encoded by this gene is localized in the endoplasmic reticulum (ER) and golgi, and

is also secreted. Reducing expression of this gene increases susceptibility to ER stress-induced death and results in cell proliferation. Activity of this protein is important in

promoting the survival of dopaminergic neurons. The presence of polymorphisms in the N-terminal arginine-rich region, including a specific mutation that changes an ATG start codon to AGG, have been reported in a variety of solid tumors; however, these polymorphisms were later shown to exist in normal tissues and are thus no longer thought to be tumor-related.

[provided by RefSeq, Apr 2014]

**shRNA Design:** These shRNA constructs were designed against multiple splice variants at this gene locus. To

be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u>. If you need a special design or shRNA sequence, please utilize our <u>custom shRNA service</u>.

#### ARMET (MANF) Human shRNA Plasmid Kit (Locus ID 7873) - TL314659

# Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
