

Product datasheet for **TL315484V**

HIF 2 alpha (EPAS1) Human shRNA Lentiviral Particle (Locus ID 2034)

Product data:

Product Type:	shRNA Lentiviral Particles
Product Name:	HIF 2 alpha (EPAS1) Human shRNA Lentiviral Particle (Locus ID 2034)
Locus ID:	2034
Synonyms:	bHLHe73; ECYT4; HIF2A; HLF; MOP2; PASD2
Vector:	pGFP-C-shLenti (TR30023)
Format:	Lentiviral particles
Components:	EPAS1 - Human shRNA lentiviral particles (4 unique 29mer target-specific shRNA, 1 scramble control), 0.5 ml each, >10 ⁷ TU/ml.
RefSeq:	NM_001430 , NM_001430.1 , NM_001430.2 , NM_001430.3 , NM_001430.4 , BC051338 , BC051338.1 , BC015869 , BM671511 , NM_001430.5
UniProt ID:	Q99814
Summary:	This gene encodes a transcription factor involved in the induction of genes regulated by oxygen, which is induced as oxygen levels fall. The encoded protein contains a basic-helix-loop-helix domain protein dimerization domain as well as a domain found in proteins in signal transduction pathways which respond to oxygen levels. Mutations in this gene are associated with erythrocytosis familial type 4. [provided by RefSeq, Nov 2009]
shRNA Design:	These shRNA constructs were designed against multiple splice variants at this gene locus. To be certain that your variant of interest is targeted, please contact techsupport@origene.com . If you need a special design or shRNA sequence, please utilize our custom shRNA service .

**Performance
Guaranteed:**

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).

Product images:

GFP signal was observed under microscope at 48 hours after transduction of TL315484A virus into HEK293 cells. TL315484A virus was prepared using lenti-shRNA TL315484A and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of TL315484B virus into HEK293 cells. TL315484B virus was prepared using lenti-shRNA TL315484B and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of [TL315484C] virus into HEK293 cells. [TL315484C] virus was prepared using lenti-shRNA [TL315484C] and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of [TL315484D] virus into HEK293 cells. [TL315484D] virus was prepared using lenti-shRNA [TL315484D] and [TR30037] packaging kit.
