

Product datasheet for TL316501

OriGene Technologies, Inc.

9620 Medical Center Drive, Ste 200 Rockville, MD 20850, US Phone: +1-888-267-4436 https://www.origene.com techsupport@origene.com EU: info-de@origene.com CN: techsupport@origene.cn

Collagen IV (COL4A3) Human shRNA Plasmid Kit (Locus ID 1285)

Product data:

Product Type: shRNA Plasmids

Product Name: Collagen IV (COL4A3) Human shRNA Plasmid Kit (Locus ID 1285)

Locus ID: 1285

Synonyms: ATS2; ATS3

Vector:pGFP-C-shLenti (TR30023)E. coli Selection:Chloramphenicol (34 ug/ml)

Mammalian Cell

Selection:

Puromycin

Format: Lentiviral plasmids

COL4A3 - Human, 4 unique 29mer shRNA constructs in lentiviral GFP vector(Gene ID = 1285).

5µg purified plasmid DNA per construct

29-mer scrambled shRNA cassette in pGFP-C-shLenti Vector, TR30021, included for free.

RefSeq: NM 000091, NM 031362, NM 031363, NM 031364, NM 031365, NM 031366, NM 000091.1,

NM 000091.2, NM 000091.3, NM 000091.4, NM 031362.1, NM 031366.1, NM 031362.2,

NM 031363.1, NM 031365.2, NM 031366.2, BC156138, BM670570, BM712932, NM 000091.5

UniProt ID: Q01955

Summary: Type IV collagen, the major structural component of basement membranes, is a multimeric

protein composed of 3 alpha subunits. These subunits are encoded by 6 different genes, alpha 1 through alpha 6, each of which can form a triple helix structure with 2 other subunits

to form type IV collagen. This gene encodes alpha 3. In the Goodpasture syndrome,

autoantibodies bind to the collagen molecules in the basement membranes of alveoli and glomeruli. The epitopes that elicit these autoantibodies are localized largely to the non-collagenous C-terminal domain of the protein. A specific kinase phosphorylates amino acids in this same C-terminal region and the expression of this kinase is upregulated during pathogenesis. This gene is also linked to an autosomal recessive form of Alport syndrome. The mutations contributing to this syndrome are also located within the exons that encode this C-terminal region. Like the other members of the type IV collagen gene family, this gene

is organized in a head-to-head conformation with another type IV collagen gene so that each

gene pair shares a common promoter. [provided by RefSeq, Jun 2010]

Collagen IV (COL4A3) Human shRNA Plasmid Kit (Locus ID 1285) - TL316501

shRNA Design:

These shRNA constructs were designed against multiple splice variants at this gene locus. To be certain that your variant of interest is targeted, please contact techsupport@origene.com. If you need a special design or shRNA sequence, please utilize our custom shRNA service.

Performance Guaranteed: OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
