NM 001144773, NM 001193570, NM 001193571, NM 001193572, NM 004078, NM 004078.1, RefSeq: NM 004078.2, NM 001144773.1, NM 001193570.1, NM 001193571.1, NM 001193572.1, BC032493, BC004265, BC007492, BC018806, NM 004078.3, NM 001193570.2 **UniProt ID:** P21291 This gene encodes a member of the cysteine-rich protein (CSRP) family. This gene family Summary: includes a group of LIM domain proteins, which may be involved in regulatory processes important for development and cellular differentiation. The LIM/double zinc-finger motif found in this gene product occurs in proteins with critical functions in gene regulation, cell growth, and somatic differentiation. Alternatively spliced transcript variants have been described. [provided by RefSeq, Aug 2010] shRNA Design: These shRNA constructs were designed against multiple splice variants at this gene locus. CSRP1 Human shRNA Plasmid Kit (Locus ID 1465) – TL316511

Performance Guaranteed: OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
