

Product datasheet for **TL316524V**

Endothelin 2 (EDN2) Human shRNA Lentiviral Particle (Locus ID 1907)

Product data:

Product Type:	shRNA Lentiviral Particles
Product Name:	Endothelin 2 (EDN2) Human shRNA Lentiviral Particle (Locus ID 1907)
Locus ID:	1907
Synonyms:	ET-2; ET2; PPET2
Vector:	pGFP-C-shLenti (TR30023)
Format:	Lentiviral particles
Components:	EDN2 - Human shRNA lentiviral particles (4 unique 29mer target-specific shRNA, 1 scramble control), 0.5 ml each, >10 ⁷ TU/ml.
RefSeq:	NM_001302269 , NM_001956 , NR_126098 , NM_001956.1 , NM_001956.2 , NM_001956.3 , NM_001956.4 , NM_001302269.1 , BC034393 , BC034393.1 , NM_001956.5 , NM_001302269.2
UniProt ID:	P20800
Summary:	This gene encodes a member of the endothelin protein family of secretory vasoconstrictive peptides. The preproprotein is processed to a short mature form which functions as a ligand for the endothelin receptors that initiate intracellular signaling events. This gene product is involved in a wide range of biological processes, such as hypertension and ovulation. Altered expression of this gene is implicated in tumorigenesis. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Oct 2014]
shRNA Design:	These shRNA constructs were designed against multiple splice variants at this gene locus. To be certain that your variant of interest is targeted, please contact techsupport@origene.com . If you need a special design or shRNA sequence, please utilize our custom shRNA service .

**Performance
Guaranteed:**

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
