## **LOX Human shRNA Plasmid Kit (Locus ID 4015)**

**Product data:** 

**Product Type:** shRNA Plasmids

**Product Name:** LOX Human shRNA Plasmid Kit (Locus ID 4015)

Locus ID: 4015 Synonyms: AAT10

Vector:pGFP-C-shLenti (TR30023)E. coli Selection:Chloramphenicol (34 ug/ml)

Mammalian Cell

Selection:

**C**C...

Puromycin

Format: Lentiviral plasmids

Components: LOX - Human, 4 unique 29mer shRNA constructs in lentiviral GFP vector(Gene ID = 4015). 5µg

purified plasmid DNA per construct

29-mer scrambled shRNA cassette in pGFP-C-shLenti Vector, TR30021, included for free.

RefSeq: NM 001178102, NM 001317073, NM 002317, NM 002317.1, NM 002317.2, NM 002317.3,

NM 002317.4, NM 002317.5, NM 002317.6, NM 001178102.1, NM 001178102.2, BC074820,

BC074872, BC089436, NM 002317.7

UniProt ID: P28300

**Summary:** This gene encodes a member of the lysyl oxidase family of proteins. Alternative splicing

results in multiple transcript variants, at least one of which encodes a preproprotein that is proteolytically processed to generate a regulatory propeptide and the mature enzyme. The copper-dependent amine oxidase activity of this enzyme functions in the crosslinking of collagens and elastin, while the propeptide may play a role in tumor suppression. In addition, defects in this gene have been linked with predisposition to thoracic aortic aneurysms and

dissections. [provided by RefSeq, Jul 2016]

**shRNA Design:** These shRNA constructs were designed against multiple splice variants at this gene locus. To

be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u>. If you need a special design or shRNA sequence, please utilize our <u>custom shRNA service</u>.

## Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
