Product datasheet for TL317582

Junctional Adhesion Molecule C (JAM3) Human shRNA Plasmid Kit (Locus ID 83700)

Product data:

Product Type:	shRNA Plasmids
Product Name:	Junctional Adhesion Molecule C (JAM3) Human shRNA Plasmid Kit (Locus ID 83700)
Locus ID:	83700
Synonyms:	JAM-2; JAM-3; JAM-C; JAMC
Vector:	pGFP-C-shLenti (TR30023)
E. coli Selection:	Chloramphenicol (34 ug/ml)
Mammalian Cell Selection:	Puromycin
Format:	Lentiviral plasmids
Components:	JAM3 - Human, 4 unique 29mer shRNA constructs in lentiviral GFP vector(Gene ID = 83700). 5µg purified plasmid DNA per construct 29-mer scrambled shRNA cassette in pGFP-C-shl enti Vector, TR30021, included for free.
RefSeq:	<u>NM 001205329</u> , <u>NM 031470</u> , <u>NM 032801</u> , <u>NM 032801.2</u> , <u>NM 032801.3</u> , <u>NM 032801.4</u> , <u>NM 001205329.1</u> , <u>BC010690</u> , <u>BC012147</u> , <u>BC057284</u> , <u>BC063031</u>
UniProt ID:	<u>Q9BX67</u>
Summary:	Tight junctions represent one mode of cell-to-cell adhesion in epithelial or endothelial cell sheets, forming continuous seals around cells and serving as a physical barrier to prevent solutes and water from passing freely through the paracellular space. The protein encoded by this immunoglobulin superfamily gene member is localized in the tight junctions between high endothelial cells. Unlike other proteins in this family, the this protein is unable to adhere to leukocyte cell lines and only forms weak homotypic interactions. The encoded protein is a member of the junctional adhesion molecule protein family and acts as a receptor for another member of this family. A mutation in an intron of this gene is associated with hemorrhagic destruction of the brain, subependymal calcification, and congenital cataracts. Alternative splicing results in multiple transcript variants.[provided by RefSeq, Apr 2011]
shRNA Design:	These shRNA constructs were designed against multiple splice variants at this gene locus. To be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u> . If you need a special design or shRNA sequence, please utilize our <u>custom shRNA service</u> .

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2023 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

	Junctional Adhesion Molecule C (JAM3) Human shRNA Plasmid Kit (Locus ID 83700) – TL317582
Performance	OriGene guarantees that the sequences in the shRNA expression cassettes are verified to
Guaranteed:	correspond to the target gene with 100% identity. One of the four constructs at minimum are
	guaranteed to produce 70% or more gene expression knock-down provided a minimum

correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
