## NIRF (UHRF2) Human shRNA Plasmid Kit (Locus ID 115426)

**Product data:** 

**Product Type:** shRNA Plasmids

**Product Name:** NIRF (UHRF2) Human shRNA Plasmid Kit (Locus ID 115426)

Locus ID:

NIRF, URF2, RNF107, MGC33463, DKFZp434B0920, DKFZp686G0837, RP11-472F14.2 Synonyms:

pGFP-C-shLenti (TR30023) Vector: E. coli Selection: Chloramphenicol (34 ug/ml)

Mammalian Cell

Selection:

Puromycin

Format:

Lentiviral plasmids

UHRF2 - Human, 4 unique 29mer shRNA constructs in lentiviral GFP vector(Gene ID = 115426). Components:

5µg purified plasmid DNA per construct

29-mer scrambled shRNA cassette in pGFP-C-shLenti Vector, TR30021, included for free.

NM 152306, NM 152896, NR 046386, NM 152896.1, NM 152896.2, BC028397, NM 152896.3 RefSeq:

**UniProt ID:** O96PU4

This gene encodes a nuclear protein which is involved in cell-cycle regulation. The encoded **Summary:** 

> protein is a ubiquitin-ligase capable of ubiquinating PCNP (PEST-containing nuclear protein), and together they may play a role in tumorigenesis. The encoded protein contains an NIRF N domain, a PHD finger, a set- and ring-associated (SRA) domain, and a RING finger domain and several of these domains have been shown to be essential for the regulation of cell proliferation. This protein may also have a role in intranuclear degradation of polyglutamine aggregates. Alternative splicing results in multiple transcript variants some of which are non-

protein coding. [provided by RefSeq, Feb 2012]

These shRNA constructs were designed against multiple splice variants at this gene locus. To shRNA Design:

> be certain that your variant of interest is targeted, please contact <a href="techsupport@origene.com">techsupport@origene.com</a>. If you need a special design or shRNA sequence, please utilize our custom shRNA service.

## Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
