Eotaxin 3 (CCL26) Human shRNA Plasmid Kit (Locus ID 10344)

Product data:

Product Type: shRNA Plasmids

Product Name: Eotaxin 3 (CCL26) Human shRNA Plasmid Kit (Locus ID 10344)

Locus ID: 10344

Synonyms: IMAC; MIP-4a; MIP-4alpha; SCYA26; TSC-1

Vector:pGFP-C-shLenti (TR30023)E. coli Selection:Chloramphenicol (34 ug/ml)

Mammalian Cell

Puromycin

Selection:

Format: Lentiviral plasmids

Components: CCL26 - Human, 4 unique 29mer shRNA constructs in lentiviral GFP vector(Gene ID = 10344).

5µg purified plasmid DNA per construct

29-mer scrambled shRNA cassette in pGFP-C-shLenti Vector, TR30021, included for free.

RefSeq: NM 006072, NM 006072.1, NM 006072.2, NM 006072.3, NM 006072.4, BC069394, BC093773,

BC101665

UniProt ID: 09Y258

Summary: This gene is one of two Cys-Cys (CC) cytokine genes clustered on the q arm of chromosome 7.

Cytokines are a family of secreted proteins involved in immunoregulatory and inflammatory processes. The CC cytokines are proteins characterized by two adjacent cysteines. The cytokine encoded by this gene displays chemotactic activity for normal peripheral blood eosinophils and basophils. This protein also has antimicrobial activity, displaying an antibacterial effect on S. pneumoniae, S. aureus, Non-typeable H. influenzae, and P. aeruginosa. The product of this gene is one of three related chemokines that specifically activate chemokine receptor CCR3. This chemokine may contribute to the eosinophil

accumulation in atopic diseases. [provided by RefSeq, Jul 2020]

shRNA Design: These shRNA constructs were designed against multiple splice variants at this gene locus. To

be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u>. If you need a special design or shRNA sequence, please utilize our custom shRNA service.

Eotaxin 3 (CCL26) Human shRNA Plasmid Kit (Locus ID 10344) - TL319888

Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
