BASP1 Human shRNA Plasmid Kit (Locus ID 10409)

Product data:

Product Type: shRNA Plasmids

Product Name: BASP1 Human shRNA Plasmid Kit (Locus ID 10409)

Locus ID: 10409

Synonyms: CAP-23; CAP23; NAP-22; NAP22

Vector: pGFP-C-shLenti (TR30023)

E. coli Selection: Chloramphenicol (34 ug/ml)

Mammalian Cell

Selection:

Puromycin

Format: Lentiviral plasmids

Components: BASP1 - Human, 4 unique 29mer shRNA constructs in lentiviral GFP vector(Gene ID = 10409).

5µg purified plasmid DNA per construct

29-mer scrambled shRNA cassette in pGFP-C-shLenti Vector, TR30021, included for free.

RefSeq: NM 001271606, NM 006317, NM 006317.1, NM 006317.2, NM 006317.3, NM 006317.4,

NM 001271606.1, BC000518, BM888431, BM973114, NM 006317.5

UniProt ID: P80723

Summary: This gene encodes a membrane bound protein with several transient phosphorylation sites

and PEST motifs. Conservation of proteins with PEST sequences among different species supports their functional significance. PEST sequences typically occur in proteins with high turnover rates. Immunological characteristics of this protein are species specific. This protein also undergoes N-terminal myristoylation. Alternative splicing results in multiple transcript

variants that encode the same protein. [provided by RefSeq, Oct 2012]

shRNA Design: These shRNA constructs were designed against multiple splice variants at this gene locus. To

be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u>. If you need a special design or shRNA sequence, please utilize our <u>custom shRNA service</u>.

Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
