

Product datasheet for TL320278V

BTK Human shRNA Lentiviral Particle (Locus ID 695)

Product data:

Product Type:	shRNA Lentiviral Particles
Product Name:	BTK Human shRNA Lentiviral Particle (Locus ID 695)
Locus ID:	695
Synonyms:	AGMX1; AT; ATK; BPK; IGHD3; IMD1; PSCTK1; XLA
Vector:	pGFP-C-shLenti (TR30023)
Format:	Lentiviral particles
Components:	BTK - Human shRNA lentiviral particles (4 unique 29mer target-specific shRNA, 1 scramble control), 0.5 ml each, >10^7 TU/ml.
RefSeq:	<u>NM_000061, NM_001287344, NM_001287345, NM_000061.1, NM_000061.2, NM_001287345.1, NM_001287345.1, NM_001287344.1, BC109079, BC109080, NM_000061.3</u>
UniProt ID:	<u>Q06187</u>
Summary:	The protein encoded by this gene plays a crucial role in B-cell development. Mutations in this gene cause X-linked agammaglobulinemia type 1, which is an immunodeficiency characterized by the failure to produce mature B lymphocytes, and associated with a failure of Ig heavy chain rearrangement. Alternative splicing results in multiple transcript variants encoding different isoforms. [provided by RefSeq, Dec 2013]
shRNA Design:	These shRNA constructs were designed against multiple splice variants at this gene locus. To be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u> . If you need a special design or shRNA sequence, please utilize our <u>custom shRNA service</u> .

GRIGENE BTK Human shRNA Lentiviral Particle (Locus ID 695) – TL320278V

Performance Guaranteed: OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).

Product images:

GFP signal was observed under microscope at 48 hours after transduction of TL320278B virus into HEK293 cells. TL320278B virus was prepared using lenti-shRNA TL320278B and [TR30037] packaging kit.
