

Product datasheet for **TL320478V**

DNA PKcs (PRKDC) Human shRNA Lentiviral Particle (Locus ID 5591)

Product data:

Product Type:	shRNA Lentiviral Particles
Product Name:	DNA PKcs (PRKDC) Human shRNA Lentiviral Particle (Locus ID 5591)
Locus ID:	5591
Synonyms:	DNA-PKC; DNA-PKcs; DNAPK; DNAPKc; DNPk1; HYRC; HYRC1; IMD26; p350; XRCC7
Vector:	pGFP-C-shLenti (TR30023)
Format:	Lentiviral particles
Components:	PRKDC - Human shRNA lentiviral particles (4 unique 29mer target-specific shRNA, 1 scramble control), 0.5 ml each, >10 ⁷ TU/ml.
RefSeq:	NM_001081640 , NM_006904 , NM_001081640.1 , BC017494 , BC024963 , BC037968
UniProt ID:	P78527
Summary:	This gene encodes the catalytic subunit of the DNA-dependent protein kinase (DNA-PK). It functions with the Ku70/Ku80 heterodimer protein in DNA double strand break repair and recombination. The protein encoded is a member of the PI3/PI4-kinase family.[provided by RefSeq, Jul 2010]
shRNA Design:	These shRNA constructs were designed against multiple splice variants at this gene locus. To be certain that your variant of interest is targeted, please contact techsupport@origene.com . If you need a special design or shRNA sequence, please utilize our custom shRNA service .

**Performance
Guaranteed:**

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).

Product images:

GFP signal was observed under microscope at 48 hours after transduction of TL320478A virus into HEK293 cells. TL320478A virus was prepared using lenti-shRNA TL320478A and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of TL320478B virus into HEK293 cells. TL320478B virus was prepared using lenti-shRNA TL320478B and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of [TL320478C] virus into HEK293 cells. [TL320478C] virus was prepared using lenti-shRNA [TL320478C] and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of [TL320478D] virus into HEK293 cells. [TL320478D] virus was prepared using lenti-shRNA [TL320478D] and [TR30037] packaging kit.
