

Product datasheet for **TL320530V**

Serum Response Factor (SRF) Human shRNA Lentiviral Particle (Locus ID 6722)

Product data:

Product Type:	shRNA Lentiviral Particles
Product Name:	Serum Response Factor (SRF) Human shRNA Lentiviral Particle (Locus ID 6722)
Locus ID:	6722
Synonyms:	MCM1
Vector:	pGFP-C-shLenti (TR30023)
Format:	Lentiviral particles
Components:	SRF - Human shRNA lentiviral particles (4 unique 29mer target-specific shRNA, 1 scramble control), 0.5 ml each, >10 ⁷ TU/ml.
RefSeq:	<u>NM_001292001</u> , <u>NM_003131</u> , <u>NM_003131.1</u> , <u>NM_003131.2</u> , <u>NM_003131.3</u> , <u>NM_001292001.1</u> , <u>BC052572</u> , <u>BC052572.1</u> , <u>BC048211</u> , <u>NM_001292001.2</u> , <u>NM_003131.4</u>
UniProt ID:	<u>P11831</u>
Summary:	This gene encodes a ubiquitous nuclear protein that stimulates both cell proliferation and differentiation. It is a member of the MADS (MCM1, Agamous, Deficiens, and SRF) box superfamily of transcription factors. This protein binds to the serum response element (SRE) in the promoter region of target genes. This protein regulates the activity of many immediate-early genes, for example c-fos, and thereby participates in cell cycle regulation, apoptosis, cell growth, and cell differentiation. This gene is the downstream target of many pathways; for example, the mitogen-activated protein kinase pathway (MAPK) that acts through the ternary complex factors (TCFs). Two transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, May 2014]
shRNA Design:	These shRNA constructs were designed against multiple splice variants at this gene locus. To be certain that your variant of interest is targeted, please contact techsupport@origene.com . If you need a special design or shRNA sequence, please utilize our custom shRNA service .

**Performance
Guaranteed:**

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
