Product Type:	shRNA Plasmids
Product Name:	NR1D1 Human shRNA Plasmid Kit (Locus ID 9572)
Locus ID:	9572
Synonyms:	ear-1; EAR1; hRev; REVERBA; REVERBalpha; THRA1; THRAL
Vector:	pGFP-C-shLenti (TR30023)
E. coli Selection:	Chloramphenicol (34 ug/ml)
Mammalian Cell Selection:	Puromycin
Format:	Lentiviral plasmids
Components:	NR1D1 - Human, 4 unique 29mer shRNA constructs in lentiviral GFP vector(Gene ID = 9572). 5µg purified plasmid DNA per construct 29-mer scrambled shRNA cassette in pGFP-C-shLenti Vector, TR30021, included for free.
RefSeq:	<u>NM_021724</u> , <u>NM_021724.1, NM_021724.2, NM_021724.3, NM_021724.4, BC056148, BC056148, BC056148, MM_021724.5</u>
UniProt ID:	<u>P20393</u>
Summary:	This gene encodes a transcription factor that is a member of the nuclear receptor subfamily 1. The encoded protein is a ligand-sensitive transcription factor that negatively regulates the expression of core clock proteins. In particular this protein represses the circadian clock transcription factor aryl hydrocarbon receptor nuclear translocator-like protein 1 (ARNTL). This protein may also be involved in regulating genes that function in metabolic, inflammatory and cardiovascular processes. [provided by RefSeq, Jan 2013]
shRNA Design:	These shRNA constructs were designed against multiple splice variants at this gene locus. To be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u> . If you need a special design or shRNA sequence, please utilize our <u>custom shRNA service</u> .

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2023 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

#### **GRIGENE** NR1D1 Human shRNA Plasmid Kit (Locus ID 9572) – TL320617

Performance Guaranteed: OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).

### **Product images:**

GFP signal was observed under microscope at 48 hours after transduction of TL320617A virus into HEK293 cells. TL320617A virus was prepared using lenti-shRNA TL320617A and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of TL320617B virus into HEK293 cells. TL320617B virus was prepared using lenti-shRNA TL320617B and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of [TL320617C] virus into HEK293 cells. [TL320617C] virus was prepared using lenti-shRNA [TL320617C] and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of [TL320617D] virus into HEK293 cells. [TL320617D] virus was prepared using lenti-shRNA [TL320617D] and [TR30037] packaging kit.
