

Product datasheet for **TL500276V**

Casp8 Mouse shRNA Lentiviral Particle (Locus ID 12370)

Product data:

Product Type:	shRNA Lentiviral Particles
Product Name:	Casp8 Mouse shRNA Lentiviral Particle (Locus ID 12370)
Locus ID:	12370
Synonyms:	Casp; CASP-8; FLI; FLICE; MAC; MACH; Mch5
Vector:	pGFP-C-shLenti (TR30023)
Format:	Lentiviral particles
Components:	Casp8 - Mouse shRNA lentiviral particles (4 unique 29mer target-specific shRNA, 1 scramble control), 0.5 ml each, >10 ⁷ TU/ml.
RefSeq:	BC006737 , BC049955 , NM_001080126 , NM_001277926 , NM_009812 , NM_001080126.1 , NM_001277926.1 , NM_009812.2
UniProt ID:	O89110
Summary:	This gene is part of a family of caspases, aspartate-specific cysteine proteases well studied for their involvement in immune and apoptosis signaling. This protein, an initiator of apoptotic cell death, is activated by death-inducing tumor necrosis family receptors and targets downstream effectors. In mouse deficiency of this gene can cause embryonic lethality. This protein may have a role in embryogenesis. Alternative splicing results in multiple transcript variants that encode different protein isoforms. [provided by RefSeq, Apr 2013]
shRNA Design:	These shRNA constructs were designed against multiple splice variants at this gene locus. To be certain that your variant of interest is targeted, please contact techsupport@origene.com . If you need a special design or shRNA sequence, please utilize our custom shRNA service .

**Performance
Guaranteed:**

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).

Product images:

GFP signal was observed under microscope at 48 hours after transduction of TL500276A virus into HEK293 cells. TL500276A virus was prepared using lenti-shRNA TL500276A and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of TL500276B virus into HEK293 cells. TL500276B virus was prepared using lenti-shRNA TL500276B and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of [TL500276C] virus into HEK293 cells. [TL500276C] virus was prepared using lenti-shRNA [TL500276C] and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of [TL500276D] virus into HEK293 cells. [TL500276D] virus was prepared using lenti-shRNA [TL500276D] and [TR30037] packaging kit.
