## **Col12a1 Mouse shRNA Lentiviral Particle (Locus ID 12816)**

## **Product data:**

**Product Type:** shRNA Lentiviral Particles

**Product Name:** Col12a1 Mouse shRNA Lentiviral Particle (Locus ID 12816)

Locus ID:

pGFP-C-shLenti (TR30023) Vector:

Format: Lentiviral particles

Col12a1 - Mouse shRNA lentiviral particles (4 unique 29mer target-specific shRNA, 1 scramble Components:

control), 0.5 ml each, >10^7 TU/ml.

NM 001290308, NM 007730, NM 007730.1, NM 007730.2, NM 001290308.1, BM963265 RefSeq:

**UniProt ID:** Q60847

Type XII collagen interacts with type I collagen-containing fibrils, the COL1 domain could be **Summary:** 

associated with the surface of the fibrils, and the COL2 and NC3 domains may be localized in

the perifibrillar matrix.[UniProtKB/Swiss-Prot Function]

These shRNA constructs were designed against multiple splice variants at this gene locus. To shRNA Design:

be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u>.

If you need a special design or shRNA sequence, please utilize our custom shRNA service.

**Performance** 

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to **Guaranteed:** correspond to the target gene with 100% identity. One of the four constructs at minimum are

guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must

be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data

preferred).
