Elk1 Mouse shRNA Lentiviral Particle (Locus ID 13712)

Product data:

Synonyms:

Product Type: shRNA Lentiviral Particles

Product Name: Elk1 Mouse shRNA Lentiviral Particle (Locus ID 13712)

Locus ID: 13712

Vector: pGFP-C-shLenti (TR30023)

Elk-: Elk-1

Format: Lentiviral particles

Components: Elk1 - Mouse shRNA lentiviral particles (4 unique 29mer target-specific shRNA, 1 scramble

control), 0.5 ml each, >10^7 TU/ml.

RefSeq: BC054474, NM 007922, NM 007922.1, NM 007922.2, NM 007922.3, NM 007922.4,

NM 007922.5, BC005706

UniProt ID: P41969

Summary: This gene is a member of the Ets family of transcription factors and of the ternary complex

factor (TCF) subfamily. Proteins of the TCF subfamily form a ternary complex by binding to the the serum response factor and the serum response element in the promoter of the c-fos proto-oncogene. The protein encoded by this gene is a nuclear target for the ras-raf-MAPK signaling cascade. This gene may produce multiple isoforms by the use of alternative

translational start codons. [provided by RefSeq, Mar 2012]

shRNA Design: These shRNA constructs were designed against multiple splice variants at this gene locus. To

be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u>. If you need a special design or shRNA sequence, please utilize our <u>custom shRNA service</u>.

Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
