

Product datasheet for TL500802

B4galt1 Mouse shRNA Plasmid (Locus ID 14595)

Product data:

Product Type: shRNA Plasmids **Product Name:** B4galt1 Mouse shRNA Plasmid (Locus ID 14595) Locus ID: 14595 Synonyms: 4-GalT; 4-GalT1; B-1; b4Gal-T1; beta-1; beta4Gal-T1; Ga; GalT; Ggtb; Ggtb2 pGFP-C-shLenti (TR30023) Vector: E. coli Selection: Chloramphenicol (34 ug/ml) Mammalian Cell Puromycin Selection: Format: Lentiviral plasmids **Components:** B4galt1 - Mouse, 4 unique 29mer shRNA constructs in lentiviral GFP vector(Gene ID = 14595). 5µg purified plasmid DNA per construct 29-mer scrambled shRNA cassette in pGFP-C-shLenti Vector, TR30021, included for free. BC053006, NM 022305, NM 022305.1, NM 022305.2, NM 022305.3, NM 022305.4, BC026824, RefSeq: NM 022305.5 **UniProt ID:** P15535 Summary: This gene encodes two distinct enzyme isoforms, a long membrane-bound form and a short soluble form. These alternate isoforms are thought to be produced through alternative nested transcription initiation and different in-frame start codon usage. These enzymes catalyze the transfer of galactose to acceptor sugars, such as N-acetylglucosamine and glucose. The long form of this enzyme is localized to the trans-Golgi membrane and is involved in glycoconjugate biosynthesis. The short form functions in lactose biosynthesis though formation of a heterodimer with alpha-lactalbumin. [provided by RefSeq, Nov 2012] These shRNA constructs were designed against multiple splice variants at this gene locus. To shRNA Design: be certain that your variant of interest is targeted, please contact techsupport@origene.com. If you need a special design or shRNA sequence, please utilize our custom shRNA service.

GRIGENE B4galt1 Mouse shRNA Plasmid (Locus ID 14595) – TL500802

Performance Guaranteed: OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
