

Product datasheet for **TL502162V**

Stk11 Mouse shRNA Lentiviral Particle (Locus ID 20869)

Product data:

Product Type:	shRNA Lentiviral Particles
Product Name:	Stk11 Mouse shRNA Lentiviral Particle (Locus ID 20869)
Locus ID:	20869
Synonyms:	AA408040; Lkb1; Par-4; R75140
Vector:	pGFP-C-shLenti (TR30023)
Format:	Lentiviral particles
Components:	Stk11 - Mouse shRNA lentiviral particles (4 unique 29mer target-specific shRNA, 1 scramble control), 0.5 ml each, >10 ⁷ TU/ml.
RefSeq:	BC052379 , NM_001301853 , NM_001301854 , NM_011492 , NR_126043 , NM_011492.1 , NM_011492.2 , NM_011492.3 , NM_011492.4 , NM_001301854.1 , NM_001301853.1 , NM_011492.5 , NM_001301854.2 , NM_001301853.2
UniProt ID:	Q9WTK7
Summary:	This gene encodes a member of the serine/threonine kinase family. The encoded protein, a known tumor suppressor, activates (via phosphorylation) adenine monophosphate-activated protein kinase (AMPK) and AMPK-related kinase proteins. This upstream regulation of the AMPK pathway is thought to regulate a number of different processes, including cell metabolism, cell polarity, apoptosis and DNA damage response. Mutations in a similar gene in human have been associated with Peutz-Jeghers syndrome. Alternative splicing results in multiple transcript variants, including the S isoform which plays a potential role in spermiogenesis. [provided by RefSeq, Sep 2014]
shRNA Design:	These shRNA constructs were designed against multiple splice variants at this gene locus. To be certain that your variant of interest is targeted, please contact techsupport@origene.com . If you need a special design or shRNA sequence, please utilize our custom shRNA service .

**Performance
Guaranteed:**

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).

Product images:

GFP signal was observed under microscope at 48 hours after transduction of [TL502162C] virus into HEK293 cells. [TL502162C] virus was prepared using lenti-shRNA [TL502162C] and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of [TL502162D] virus into HEK293 cells. [TL502162D] virus was prepared using lenti-shRNA [TL502162D] and [TR30037] packaging kit.
