

# Product datasheet for TL502408V

# Vhl Mouse shRNA Lentiviral Particle (Locus ID 22346)

# **Product data:**

#### **Product Type:** shRNA Lentiviral Particles **Product Name:** Vhl Mouse shRNA Lentiviral Particle (Locus ID 22346) Locus ID: 22346 Synonyms: Vhlh Vector: pGFP-C-shLenti (TR30023) Format: Lentiviral particles **Components:** Vhl - Mouse shRNA lentiviral particles (4 unique 29mer target-specific shRNA, 1 scramble control), 0.5 ml each, >10^7 TU/ml. **RefSeq:** BC052417, NM 009507, NM 009507.1, NM 009507.2, NM 009507.3, NM 009507.4 **UniProt ID:** P40338 Summary: Involved in the ubiquitination and subsequent proteasomal degradation via the von Hippel-Lindau ubiquitination complex. Seems to act as a target recruitment subunit in the E3 ubiquitin ligase complex and recruits hydroxylated hypoxia-inducible factor (HIF) under normoxic conditions. Involved in transcriptional repression through interaction with HIF1A, HIF1AN and histone deacetylases. Ubiquitinates, in an oxygen-responsive manner, ADRB2 (By similarity).[UniProtKB/Swiss-Prot Function] shRNA Design: These shRNA constructs were designed against multiple splice variants at this gene locus. To be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u>. If you need a special design or shRNA sequence, please utilize our custom shRNA service.

### **GRIGENE** Vhl Mouse shRNA Lentiviral Particle (Locus ID 22346) – TL502408V

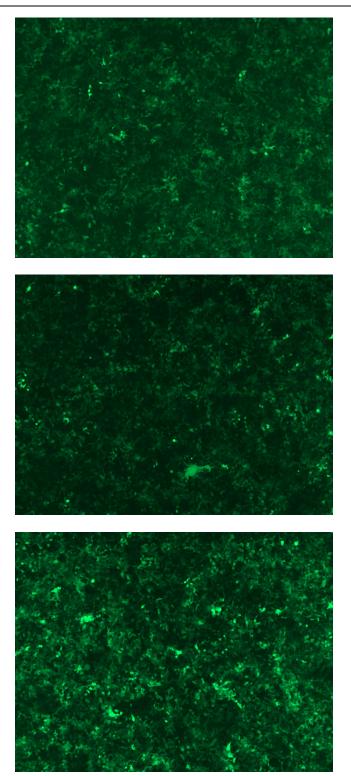

Performance Guaranteed: OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).

## **Product images:**

GFP signal was observed under microscope at 48 hours after transduction of TL502408A virus into HEK293 cells. TL502408A virus was prepared using lenti-shRNA TL502408A and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of TL502408B virus into HEK293 cells. TL502408B virus was prepared using lenti-shRNA TL502408B and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of [TL502408C] virus into HEK293 cells. [TL502408C] virus was prepared using lenti-shRNA [TL502408C] and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of [TL502408D] virus into HEK293 cells. [TL502408D] virus was prepared using lenti-shRNA [TL502408D] and [TR30037] packaging kit.
