## Pdcd1lg2 Mouse shRNA Lentiviral Particle (Locus ID 58205)

## **Product data:**

**Product Type:** shRNA Lentiviral Particles

**Product Name:** Pdcd1lg2 Mouse shRNA Lentiviral Particle (Locus ID 58205)

Locus ID:

B7-DC; Btdc; F730015O22Rik; PD-L2 Synonyms:

Vector: pGFP-C-shLenti (TR30023)

Format: Lentiviral particles

Components: Pdcd1lg2 - Mouse shRNA lentiviral particles (4 unique 29mer target-specific shRNA, 1

scramble control), 0.5 ml each, >10^7 TU/ml.

RefSeq: BC104138, BC104139, NM 021396, NM 021396.1, NM 021396.2

**UniProt ID:** O9WUL5

Summary: Involved in the costimulatory signal essential for T-cell proliferation and IFNG production in a

PDCD1-independent manner. Interaction with PDCD1 inhibits T-cell proliferation by blocking

cell cycle progression and cytokine production.[UniProtKB/Swiss-Prot Function]

shRNA Design: These shRNA constructs were designed against multiple splice variants at this gene locus. To

be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u>.

If you need a special design or shRNA sequence, please utilize our custom shRNA service.

**Performance** 

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to **Guaranteed:** correspond to the target gene with 100% identity. One of the four constructs at minimum are

guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must

be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
