## **Ctdnep1 Mouse shRNA Lentiviral Particle (Locus ID 67181)**

#### **Product data:**

**Product Type:** shRNA Lentiviral Particles

**Product Name:** Ctdnep1 Mouse shRNA Lentiviral Particle (Locus ID 67181)

**Locus ID:** 6718

Synonyms: 2610507E10Rik; Dullard Vector: pGFP-C-shLenti (TR30023)

Format: Lentiviral particles

Components: Dullard - Mouse shRNA lentiviral particles (4 unique 29mer target-specific shRNA, 1 scramble

control), 0.5 ml each, >10^7 TU/ml.

RefSeq: <u>BC018265</u>, <u>NM 026017</u>, <u>NM 026017.1</u>, <u>NM 026017.2</u>

UniProt ID: Q3TP92

**Summary:** Serine/threonine protein phosphatase forming with CNEP1R1 an active phosphatase complex

that dephosphorylates and may activate LPIN1 and LPIN2. LPIN1 and LPIN2 are phosphatidate phosphatases that catalyze the conversion of phosphatidic acid to diacylglycerol and control the metabolism of fatty acids at different levels. May indirectly

modulate the lipid composition of nuclear and/or endoplasmic reticulum membranes and be required for proper nuclear membrane morphology and/or dynamics. May also indirectly regulate the production of lipid droplets and triacylglycerol. May antagonize BMP signaling

(By similarity).[UniProtKB/Swiss-Prot Function]

shRNA Design: These shRNA constructs were designed against multiple splice variants at this gene locus. To

be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u>. If you need a special design or shRNA sequence, please utilize our <u>custom shRNA service</u>.

## Ctdnep1 Mouse shRNA Lentiviral Particle (Locus ID 67181) - TL503840V

# Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
