Fdps Mouse shRNA Lentiviral Particle (Locus ID 110196)

Product data:

Product Type: shRNA Lentiviral Particles

Product Name: Fdps Mouse shRNA Lentiviral Particle (Locus ID 110196)

Locus ID: 110196

Synonyms: 6030492I17Rik; AI256750; Fdpsl1; mKIAA1293

Vector: pGFP-C-shLenti (TR30023)

Format: Lentiviral particles

Components: Fdps - Mouse shRNA lentiviral particles (4 unique 29mer target-specific shRNA, 1 scramble

control), 0.5 ml each, >10^7 TU/ml.

RefSeq: BC048497, BC087886, NM 001253751, NM 134469, NM 134469.1, NM 134469.2,

NM 134469.3, NM 134469.4, NM 001253751.1

UniProt ID: Q920E5

Summary: Key enzyme in isoprenoid biosynthesis which catalyzes the formation of farnesyl

diphosphate (FPP), a precursor for several classes of essential metabolites including sterols,

dolichols, carotenoids, and ubiquinones. FPP also serves as substrate for protein

farnesylation and geranylgeranylation. Catalyzes the sequential condensation of isopentenyl pyrophosphate with the allylic pyrophosphates, dimethylallyl pyrophosphate, and then with the resultant geranylpyrophosphate to the ultimate product farnesyl pyrophosphate (By

similarity).[UniProtKB/Swiss-Prot Function]

shRNA Design: These shRNA constructs were designed against multiple splice variants at this gene locus. To

be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u>. If you need a special design or shRNA sequence, please utilize our custom shRNA service.

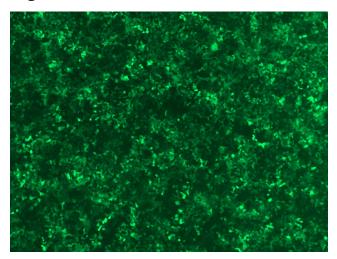

Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

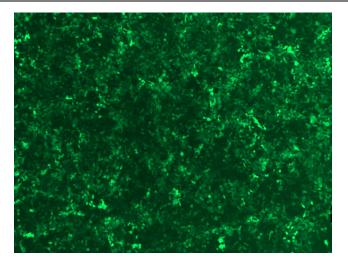

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).

Product images:

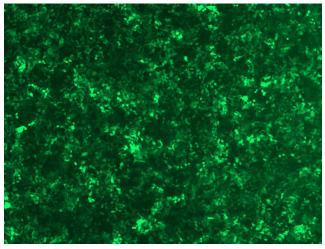

GFP signal was observed under microscope at 48 hours after transduction of TL505924A virus into HEK293 cells. TL505924A virus was prepared using lenti-shRNA TL505924A and [TR30037] packaging kit.

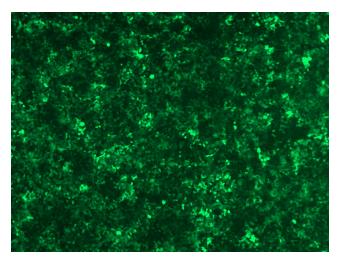

GFP signal was observed under microscope at 48 hours after transduction of TL505924B virus into HEK293 cells. TL505924B virus was prepared using lenti-shRNA TL505924B and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of [TL505924C] virus into HEK293 cells. [TL505924C] virus was prepared using lenti-shRNA [TL505924C] and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of [TL505924D] virus into HEK293 cells. [TL505924D] virus was prepared using lenti-shRNA [TL505924D] and [TR30037] packaging kit.
