<b>Summary:</b>	Polyglutamylase which preferentially modifies alpha-tubulin (PubMed:17499049, PubMed:21074048). Mediates tubulin polyglutamylation in cilia (PubMed:22246503). Involved in the side-chain elongation step of the polyglutamylation reaction rather than in the initiation step (PubMed:17499049, PubMed:21074048). Generates long side-chains (PubMed:20530212). Generates polyglutamylation of CGAS, leading to impair the DNA-binding activity of CGAS (PubMed:26829768).[UniProtKB/Swiss-Prot Function]

**Performance  
Guaranteed:**

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at [techsupport@origene.com](mailto:techsupport@origene.com). Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
