Rgs9bp Mouse shRNA Lentiviral Particle (Locus ID 243923)

Product data:

Product Type: shRNA Lentiviral Particles

Product Name: Rgs9bp Mouse shRNA Lentiviral Particle (Locus ID 243923)

Locus ID: 243923

Synonyms: R9AP; Rgs9-1bp

Vector: pGFP-C-shLenti (TR30023)

Format: Lentiviral particles

Components: Rgs9bp - Mouse shRNA lentiviral particles (4 unique 29mer target-specific shRNA, 1 scramble

control), 0.5 ml each, >10^7 TU/ml.

RefSeq: <u>BC118006</u>, <u>NM 145840</u>, <u>NM 145840.1</u>, <u>NM 145840.2</u>, <u>NM 145840.3</u>

UniProt ID: Q148R9

Summary: Regulator of G protein-coupled receptor (GPCR) signaling in phototransduction. Participates

in the recovery phase of visual transduction via its interaction with RGS9-1 isoform. Acts as a

membrane-anchor that mediates the targeting of RGS9-1 to the photoreceptor outer

segment, where phototransduction takes place. Enhances the ability of RGS9-1 to stimulate G protein GTPase activity, allowing the visual signal to be terminated on the physiologically time

scale. It also controls the proteolytic stability of RGS9-1, probably by protecting it from

degradation.[UniProtKB/Swiss-Prot Function]

shRNA Design: These shRNA constructs were designed against multiple splice variants at this gene locus. To

be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u>. If you need a special design or shRNA sequence, please utilize our <u>custom shRNA service</u>.

Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
