Slc27a2 Mouse shRNA Lentiviral Particle (Locus ID 26458)

Product data:

Product Type: shRNA Lentiviral Particles

Product Name: Slc27a2 Mouse shRNA Lentiviral Particle (Locus ID 26458)

Locus ID: 26458

Synonyms: ACSVL1; FATP2; Vlac; Vlacs; VLCS

Vector: pGFP-C-shLenti (TR30023)

Format: Lentiviral particles

Components: Slc27a2 - Mouse shRNA lentiviral particles (4 unique 29mer target-specific shRNA, 1 scramble

control), 0.5 ml each, >10^7 TU/ml.

RefSeq: <u>BC013442</u>, <u>BC022170</u>, <u>BC024735</u>, <u>NM 011978</u>, <u>NM 011978.1</u>, <u>NM 011978.2</u>

UniProt ID: <u>O35488</u>

Summary: Acyl-CoA synthetase probably involved in bile acid metabolism. Proposed to activate C27

precursors of bile acids to their CoA thioesters derivatives before side chain cleavage via peroxisomal beta-oxidation occurs. In vitro, activates 3-alpha,7-alpha,12-alpha-trihydroxy-5-

beta-cholestanate (THCA), the C27 precursor of cholic acid deriving from the de novo

synthesis from cholesterol. Does not utilize C24 bile acids as substrates. In vitro, also activates long- and branched-chain fatty acids and may have additional roles in fatty acid metabolism (By similarity). May be involved in translocation of long-chain fatty acids (LFCA) across

membranes.[UniProtKB/Swiss-Prot Function]

shRNA Design: These shRNA constructs were designed against multiple splice variants at this gene locus. To

be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u>. If you need a special design or shRNA sequence, please utilize our custom shRNA service.

Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
