

Product datasheet for TL509746

Myh8 Mouse shRNA Plasmid (Locus ID 17885)

Product data:

Product Type: shRNA Plasmids **Product Name:** Myh8 Mouse shRNA Plasmid (Locus ID 17885) Locus ID: 17885 4832426G23Rik; AI327267; MHCp; Myh; MyHC-; MyHC-pn; Myhs; Myhs-p; Myhsp Synonyms: pGFP-C-shLenti (TR30023) Vector: E. coli Selection: Chloramphenicol (34 ug/ml) Mammalian Cell Puromycin Selection: Format: Lentiviral plasmids **Components:** Myh8 - Mouse, 4 unique 29mer shRNA constructs in lentiviral GFP vector(Gene ID = 17885). 5µg purified plasmid DNA per construct 29-mer scrambled shRNA cassette in pGFP-C-shLenti Vector, TR30021, included for free. NM 177369, NM 177369.3, BC150737 RefSeq: **UniProt ID:** P13542 This gene encodes a myosin heavy chain. The encoded protein forms a hexamer with two Summary: heavy chains, two alkali light chains, and two regulatory light chain components. This complex functions in muscle contraction. This gene is located in a cluster of related genes on chromosome 11. [provided by RefSeq, Jun 2013] shRNA Design: These shRNA constructs were designed against multiple splice variants at this gene locus. To be certain that your variant of interest is targeted, please contact techsupport@origene.com. If you need a special design or shRNA sequence, please utilize our custom shRNA service.

GRIGENE Myh8 Mouse shRNA Plasmid (Locus ID 17885) – TL509746

Performance Guaranteed: OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
