

## Product datasheet for **TL509827V**

### Tsc22d3 Mouse shRNA Lentiviral Particle (Locus ID 14605)

#### Product data:

Product Type:	shRNA Lentiviral Particles
Product Name:	Tsc22d3 Mouse shRNA Lentiviral Particle (Locus ID 14605)
Locus ID:	14605
Synonyms:	DIP; Dsip1; Gilz; Tilz3; TSC-22R
Vector:	pGFP-C-shLenti (TR30023)
Format:	Lentiviral particles
Components:	Tsc22d3 - Mouse shRNA lentiviral particles (4 unique 29mer target-specific shRNA, 1 scramble control), 0.5 ml each, >10 <sup>7</sup> TU/ml.
RefSeq:	<a href="#">BC028813</a> , <a href="#">NM_001077364</a> , <a href="#">NM_010286</a> , <a href="#">NR_122039</a> , <a href="#">NM_010286.1</a> , <a href="#">NM_010286.2</a> , <a href="#">NM_010286.3</a> , <a href="#">NM_010286.4</a> , <a href="#">NM_001077364.1</a> , <a href="#">NM_010286.5</a>
UniProt ID:	<a href="#">Q9Z2S7</a>
Summary:	Protects T-cells from IL2 deprivation-induced apoptosis through the inhibition of FOXO3A transcriptional activity that leads to the down-regulation of the pro-apoptotic factor BCL2L11. In macrophages, plays a role in the anti-inflammatory and immunosuppressive effects of glucocorticoids and IL10. In T-cells, inhibits anti-CD3-induced NFKB1 nuclear translocation. In vitro, suppresses AP1 and NFKB1 DNA-binding activities (By similarity). Isoform 1 and isoform 4 inhibit myogenic differentiation and mediate anti-myogenic effects of glucocorticoids by binding and regulating MYOD1 and HDAC1 transcriptional activity resulting in reduced expression of MYOG.[UniProtKB/Swiss-Prot Function]
shRNA Design:	These shRNA constructs were designed against multiple splice variants at this gene locus. To be certain that your variant of interest is targeted, please contact <a href="mailto:techsupport@origene.com">techsupport@origene.com</a> . If you need a special design or shRNA sequence, please utilize our <a href="#">custom shRNA service</a> .

**Performance  
Guaranteed:**

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at [techsupport@origene.com](mailto:techsupport@origene.com). Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
