structs were designed against multiple splice variants at this gene locus. To ur variant of interest is targeted, please contact <u>techsupport@origene.com</u> . :ial design or shRNA sequence, please utilize our <u>custom shRNA service</u> .
tes that the sequences in the shRNA expression cassettes are verified to e target gene with 100% identity. One of the four constructs at minimum are oduce 70% or more gene expression knock-down provided a minimum ency of 80% is achieved. Western Blot data is recommended over qPCR to cing effect of the shRNA constructs 72 hrs post transfection. To properly n, the gene expression level from the included scramble control vector must rison with the target-specific shRNA transfected samples.
