

Product datasheet for TL510342

Ndel1 Mouse shRNA Plasmid (Locus ID 83431)

Product data:

Product Type: shRNA Plasmids

Product Name: Ndel1 Mouse shRNA Plasmid (Locus ID 83431)

Locus ID:

2600006O07Rik; MITAP1; mNudel; NUDEL Synonyms:

Vector: pGFP-C-shLenti (TR30023)

E. coli Selection: Chloramphenicol (34 ug/ml)

Mammalian Cell

Selection:

Puromycin

Format: Lentiviral plasmids

Ndel1 - Mouse, 4 unique 29mer shRNA constructs in lentiviral GFP vector(Gene ID = 83431). Components:

5µg purified plasmid DNA per construct

29-mer scrambled shRNA cassette in pGFP-C-shLenti Vector, TR30021, included for free.

BC021434, BC046796, NM 023668, NM 023668.1, NM 023668.2, NM 001363304, RefSeq:

NM 001363305, NM 023668.3

UniProt ID: O9ERR1

Summary: Required for organization of the cellular microtubule array and microtubule anchoring at the

centrosome. May regulate microtubule organization at least in part by targeting the

microtubule severing protein KATNA1 to the centrosome. Also positively regulates the activity of the minus-end directed microtubule motor protein dynein. May enhance dynein-mediated microtubule sliding by targeting dynein to the microtubule plus ends. Required for several dynein- and microtubule-dependent processes such as the maintenance of Golgi integrity, the centripetal motion of secretory vesicles and the coupling of the nucleus and centrosome. Also required during brain development for the migration of newly formed neurons from the

ventricular/subventricular zone toward the cortical plate. Plays a role, together with DISC1, in the regulation of neurite outgrowth. Required for mitosis in some cell types but appears to be dispensible for mitosis in cortical neuronal progenitors, which instead requires NDE1.

Facilitates the polymerization of neurofilaments from the individual subunits NEFH and NEFL.

Positively regulates lysosome peripheral distribution and ruffled border formation in

osteoclasts (PubMed:27777970).[UniProtKB/Swiss-Prot Function]

shRNA Design:

These shRNA constructs were designed against multiple splice variants at this gene locus. To be certain that your variant of interest is targeted, please contact techsupport@origene.com. If you need a special design or shRNA sequence, please utilize our custom shRNA service.

Performance Guaranteed: OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
