### **Spag4 Mouse shRNA Plasmid (Locus ID 245865)**

**Product data:** 

**Product Type:** shRNA Plasmids

**Product Name:** Spag4 Mouse shRNA Plasmid (Locus ID 245865)

**Locus ID:** 245865

**Synonyms:** 1700041K21Rik; mKIAA4118; MNCb-0953; Sun4

Vector: pGFP-C-shLenti (TR30023)

E. coli Selection: Chloramphenicol (34 ug/ml)

**Mammalian Cell** 

Selection:

Puromycin

Format: Lentiviral plasmids

**Components:** Spag4 - Mouse, 4 unique 29mer shRNA constructs in lentiviral GFP vector(Gene ID = 245865).

5µg purified plasmid DNA per construct

29-mer scrambled shRNA cassette in pGFP-C-shLenti Vector, TR30021, included for free.

RefSeq: NM 139151, NM 139151.1, NM 139151.2, NM 139151.3, NM 139151.4, BC107321, BC107322

UniProt ID: Q9||F2

**Summary:** Involved in spermatogenesis. Required for sperm head formation but not required to

establish and maintain general polarity of the sperm head. Required for anchoring and

organization of the manchette. Required for targeting of SUN3 and probably SYNE1 through a

probable SUN1:SYNE3 LINC complex to the nuclear envelope and involved in accurate posterior sperm head localization of the complex. May anchor SUN3 the nuclear envelope. Involved in maintenance of the nuclear envelope integrity. May assist the organization and

assembly of outer dense fibers (ODFs), a specific structure of the sperm tail.

[UniProtKB/Swiss-Prot Function]

shRNA Design: These shRNA constructs were designed against multiple splice variants at this gene locus. To

be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u>. If you need a special design or shRNA sequence, please utilize our <u>custom shRNA service</u>.

# Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
