

Product datasheet for **TL511273V**

Ido1 Mouse shRNA Lentiviral Particle (Locus ID 15930)

Product data:

Product Type:	shRNA Lentiviral Particles
Product Name:	Ido1 Mouse shRNA Lentiviral Particle (Locus ID 15930)
Locus ID:	15930
Synonyms:	Ido; Indo
Vector:	pGFP-C-shLenti (TR30023)
Format:	Lentiviral particles
Components:	Ido1 - Mouse shRNA lentiviral particles (4 unique 29mer target-specific shRNA, 1 scramble control), 0.5 ml each, >10 ⁷ TU/ml.
RefSeq:	BC049931 , NM_001293690 , NM_008324 , NM_008324.1 , NM_008324.2 , NM_001293690.1
UniProt ID:	P28776
Summary:	Catalyzes the first and rate limiting step of the catabolism of the essential amino acid tryptophan along the kynurenine pathway. Involved in the peripheral immune tolerance, contributing to maintain homeostasis by preventing autoimmunity or immunopathology that would result from uncontrolled and overreacting immune responses. Tryptophan shortage inhibits T lymphocytes division and accumulation of tryptophan catabolites induces T-cell apoptosis and differentiation of regulatory T-cells. Acts as a suppressor of anti-tumor immunity (PubMed:25691885). Limits the growth of intracellular pathogens by depriving tryptophan. Protects the fetus from maternal immune rejection (Ref. 3).[UniProtKB/Swiss-Prot Function]
shRNA Design:	These shRNA constructs were designed against multiple splice variants at this gene locus. To be certain that your variant of interest is targeted, please contact techsupport@origene.com . If you need a special design or shRNA sequence, please utilize our custom shRNA service .

**Performance
Guaranteed:**

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).

Product images:

GFP signal was observed under microscope at 48 hours after transduction of TL511273A virus into HEK293 cells. TL511273A virus was prepared using lenti-shRNA TL511273A and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of TL511273B virus into HEK293 cells. TL511273B virus was prepared using lenti-shRNA TL511273B and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of [TL511273D] virus into HEK293 cells. [TL511273D] virus was prepared using lenti-shRNA [TL511273D] and [TR30037] packaging kit.
