

Product datasheet for TL513852V

F2r Mouse shRNA Lentiviral Particle (Locus ID 14062)

Product data:

Product Type: shRNA Lentiviral Particles **Product Name:** F2r Mouse shRNA Lentiviral Particle (Locus ID 14062) Locus ID: 14062 Synonyms: AI482343; Cf2r; Par1; ThrR Vector: pGFP-C-shLenti (TR30023) Format: Lentiviral particles **Components:** F2r - Mouse shRNA lentiviral particles (4 unique 29mer target-specific shRNA, 1 scramble control), 0.5 ml each, >10^7 TU/ml. **RefSeq:** BC031516, NM 010169, NM 010169.1, NM 010169.2, NM 010169.3, NM 010169.4 **UniProt ID:** P30558 Summary: High affinity receptor for activated thrombin coupled to G proteins that stimulate phosphoinositide hydrolysis.[UniProtKB/Swiss-Prot Function] These shRNA constructs were designed against multiple splice variants at this gene locus. To shRNA Design: be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u>. If you need a special design or shRNA sequence, please utilize our custom shRNA service. Performance OriGene guarantees that the sequences in the shRNA expression cassettes are verified to **Guaranteed:** correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples. For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data

GFP signal was observed under microscope at 48 hours after transduction of TL513852A virus into HEK293 cells. TL513852A virus was prepared using lenti-shRNA TL513852A and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of TL513852B virus into HEK293 cells. TL513852B virus was prepared using lenti-shRNA TL513852B and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of [TL513852C] virus into HEK293 cells. [TL513852C] virus was prepared using lenti-shRNA [TL513852C] and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of [TL513852D] virus into HEK293 cells. [TL513852D] virus was prepared using lenti-shRNA [TL513852D] and [TR30037] packaging kit.
