

# Product datasheet for TL514187V

## Khsrp Mouse shRNA Lentiviral Particle (Locus ID 16549)

## **Product data:**

Product Type:	shRNA Lentiviral Particles
Product Name:	Khsrp Mouse shRNA Lentiviral Particle (Locus ID 16549)
Locus ID:	16549
Synonyms:	6330409F21Rik; Fbp2; Fubp2; Ksrp
Vector:	pGFP-C-shLenti (TR30023)
Format:	Lentiviral particles
Components:	Khsrp - Mouse shRNA lentiviral particles (4 unique 29mer target-specific shRNA, 1 scramble control), 0.5 ml each, >10^7 TU/ml.
RefSeq:	<u>NM 010613, NM 010613.1, NM 010613.2, NM 010613.3, BC064454, BC108414, BC166022</u>
UniProt ID:	<u>Q3U0V1</u>
Summary:	Binds to the dendritic targeting element and may play a role in mRNA trafficking. Part of a ternary complex that binds to the downstream control sequence (DCS) of the pre-mRNA. Mediates exon inclusion in transcripts that are subject to tissue-specific alternative splicing. May interact with single-stranded DNA from the far-upstream element (FUSE). May activate gene expression. Also involved in degradation of inherently unstable mRNAs that contain AU-rich elements (AREs) in their 3' UTR, possibly by recruiting degradation machinery to ARE-containing mRNAs (By similarity).[UniProtKB/Swiss-Prot Function]
shRNA Design:	These shRNA constructs were designed against multiple splice variants at this gene locus. To be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u> . If you need a special design or shRNA sequence, please utilize our custom shRNA service.

#### Scrigene Khsrp Mouse shRNA Lentiviral Particle (Locus ID 16549) – TL514187V

Performance Guaranteed: OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).

### **Product images:**

GFP signal was observed under microscope at 48 hours after transduction of TL514187A virus into HEK293 cells. TL514187A virus was prepared using lenti-shRNA TL514187A and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of TL514187B virus into HEK293 cells. TL514187B virus was prepared using lenti-shRNA TL514187B and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of [TL514187C] virus into HEK293 cells. [TL514187C] virus was prepared using lenti-shRNA [TL514187C] and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of [TL514187D] virus into HEK293 cells. [TL514187D] virus was prepared using lenti-shRNA [TL514187D] and [TR30037] packaging kit.
