

Product datasheet for TL514284

Pabpn1 Mouse shRNA Plasmid (Locus ID 54196)

Product data:

OriGene Technologies, Inc.

9620 Medical Center Drive, Ste 200 Rockville, MD 20850, US Phone: +1-888-267-4436 https://www.origene.com techsupport@origene.com EU: info-de@origene.com CN: techsupport@origene.cn

| Product Name:PaLocus ID:54Synonyms:m | hRNA Plasmids Pabpn1 Mouse shRNA Plasmid (Locus ID 54196) 94196 nPABII; PAB2; Pabp3 9GFP-C-shLenti (TR30023) |
|---|---|
| Locus ID: 54 Synonyms: m | nPABII; PAB2; Pabp3 |
| Synonyms: m | nPABII; PAB2; Pabp3 |
| | |
| Vector: p(| oGFP-C-shLenti (TR30023) |
| p. | |
| E. coli Selection: Cl | Chloramphenicol (34 ug/ml) |
| Mammalian Cell Pu Selection: | Puromycin |
| Format: Le | entiviral plasmids |
| 5µ | Pabpn1 - Mouse, 4 unique 29mer shRNA constructs in lentiviral GFP vector(Gene ID = 54196). Sug purified plasmid DNA per construct I9-mer scrambled shRNA cassette in pGFP-C-shLenti Vector, TR30021, included for free. |
| RefSeq: <u>B</u> | 3C055866, NM 019402, NM 019402.1, NM 019402.2, BC049869 |
| UniProt ID: Q | <u>28CCS6</u> |
| ta cc le of (N tr, Bi de cc de nu | nvolved in the 3'-end formation of mRNA precursors (pre-mRNA) by the addition of a poly(A) ail of 200-250 nt to the upstream cleavage product. Stimulates poly(A) polymerase (PAPOLA) onferring processivity on the poly(A) tail elongation reaction and controls also the poly(A) tail ength. Increases the affinity of poly(A) polymerase for RNA. Is also present at various stages of mRNA metabolism including nucleocytoplasmic trafficking and nonsense-mediated decay NMD) of mRNA. Cooperates with SKIP to synergistically activate E-box-mediated ranscription through MYOD1 and may regulate the expression of muscle-specific genes. Binds to poly(A) and to poly(G) with high affinity. May protect the poly(A) tail from legradation. Subunit of the trimeric poly(A) tail exosome targeting (PAXT) complex, a omplex that directs a subset of long and polyadenylated poly(A) RNAs for exosomal legradation. The RNA exosome is fundamental for the degradation of RNA in eukaryotic nuclei. Substrate targeting is facilitated by its cofactor MTREX, which links to RNA-binding protein adapters (By similarity).[UniProtKB/Swiss-Prot Function] |
| be | These shRNA constructs were designed against multiple splice variants at this gene locus. To be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u> . If you need a special design or shRNA sequence, please utilize our <u>custom shRNA service</u> . |

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2023 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

GRIGENE Pabpn1 Mouse shRNA Plasmid (Locus ID 54196) – TL514284

Performance Guaranteed: OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
