

## Product datasheet for TL516508V

## Aloxe3 Mouse shRNA Lentiviral Particle (Locus ID 23801)

## **Product data:**

| Product Type: | shRNA Lentiviral Particles   |
|---------------|--|
| Product Name: | Aloxe3 Mouse shRNA Lentiviral Particle (Locus ID 23801)  |
| Locus ID:     | 23801  |
| Synonyms:     | e-LOX-3; eLOX-3  |
| Vector:       | pGFP-C-shLenti (TR30023)   |
| Format:       | Lentiviral particles   |
| Components:   | Aloxe3 - Mouse shRNA lentiviral particles (4 unique 29mer target-specific shRNA, 1 scramble<br>control), 0.5 ml each, >10^7 TU/ml.   |
| RefSeq:       | <u>BC116258, BC116259, NM 011786, NM 011786.1, NM 011786.2</u>   |
| UniProt ID:   | <u>Q9WV07</u>  |
| Summary:      | Non-heme iron-containing lipoxygenase which is atypical in that it displays a prominent<br>hydroperoxide isomerase activity and a reduced dioxygenase activity compared to other<br>lipoxygenases. The hydroperoxide isomerase activity catalyzes the isomerization of<br>hydroperoxides, derived from arachidonic and linoleic acid by ALOX12B, into hepoxilin-type<br>epoxyalcohols. The dioxygenase activity requires a step of activation of the enzyme by<br>molecular oxygen. In presence of oxygen, oxygenates polyunsaturated fatty acids, including<br>arachidonic acid, to produce fatty acid hydroperoxides. In the skin, acts downstream of<br>ALOX12B on the linoleate moiety of esterified omega-hydroxyacyl-sphingosine (EOS)<br>ceramides to produce an epoxy-ketone derivative, a crucial step in the conjugation of omega-<br>hydroxyceramide to membrane proteins. Therefore plays a crucial role in the synthesis of<br>corneocytes lipid envelope and the establishment of the skin barrier to water loss. In parallel,<br>it may have a signaling function in barrier formation through the production of hepoxilins<br>metabolites. Plays also a role in adipocyte differentiation through hepoxilin A3 and hepoxilin<br>B3 production which in turn activate PPARG. Through the production of hepoxilins in the<br>spinal cord, it may regulate inflammatory tactile allodynia.[UniProtKB/Swiss-Prot Function] |
| shRNA Design: | These shRNA constructs were designed against multiple splice variants at this gene locus. To be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u> .<br>If you need a special design or shRNA sequence, please utilize our <u>custom shRNA service</u> .   |

Performance Guaranteed: OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
