| Product Type:                | shRNA Plasmids  |
|------------------------------|---|
| Product Name:                | Mad2l2 Mouse shRNA Plasmid (Locus ID 71890)   |
| Locus ID:                    | 71890   |
| Synonyms:                    | 2310033C13Rik; G1-453-4; MAD2B; repro22; REV7   |
| Vector:                      | pGFP-C-shLenti (TR30023)  |
| E. coli Selection:           | Chloramphenicol (34 ug/ml)  |
| Mammalian Cell<br>Selection: | Puromycin   |
| Format:                      | Lentiviral plasmids   |
| Components:                  | Mad2l2 - Mouse, 4 unique 29mer shRNA constructs in lentiviral GFP vector(Gene ID = 71890).<br>5µg purified plasmid DNA per construct<br>29-mer scrambled shRNA cassette in pGFP-C-shLenti Vector, TR30021, included for free.   |
| RefSeq:                      | <u>BC011282, BC071264, NM 001305420, NM 027985, NM 027985.1, NM 027985.2, NM 027985.3</u>   |
| UniProt ID:                  | <u>Q9D752</u>   |
| Summary:                     | Adapter protein able to interact with different proteins and involved in different biological processes. Mediates the interaction between the error-prone DNA polymerase zeta catalytic subunit REV3L and the inserter polymerase REV1, thereby mediating the second polymerase switching in translesion DNA synthesis. Translesion DNA synthesis releases the replication blockade of replicative polymerases, stalled in presence of DNA lesions. Component of the shieldin complex, which plays an important role in repair of DNA double-stranded breaks (DSBs). During G1 and S phase of the cell cycle, the complex functions downstream of TP53BP1 to promote non-homologous end joining (NHEJ) and suppress DNA end resection. Mediates various NHEJ-dependent processes including immunoglobulin class-switch recombination, and fusion of unprotected telomeres. May also regulate another aspect of cellular response to DNA damage through regulation of the JNK-mediated phosphorylation and activation of the anaphase promoting complex APC thereby regulating progression through the cell cycle. Regulates TCF7L2-mediated gene transcription and may play a role in epithelial-mesenchymal transdifferentiation.[UniProtKB/Swiss-Prot Function] |

|                            | Mad2l2 Mouse shRNA Plasmid (Locus ID 71890) – TL516985   |
|----------------------------|--|
| shRNA Design:              | These shRNA constructs were designed against multiple splice variants at this gene locus. To be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u> .<br>If you need a special design or shRNA sequence, please utilize our <u>custom shRNA service</u> .   |
| Performance<br>Guaranteed: | OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples. |
|                            | For non-conforming shRNA, requests for replacement product must be made within ninety<br>(90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with<br>newly designed constructs, please contact Technical Services at techsupport@origene.com.<br>Please provide your data indicating the transfection efficiency and measurement of gene<br>expression knockdown compared to the scrambled shRNA control (Western Blot data<br>preferred).   |
